## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Wolter et al (US 5116472).

Wolter teaches a process of making a substrate for printed circuit boards. The substrate is comprised of a metal layer and an electrical insulating material (col 1 L 6-10). A metallic conductor track is then printed onto the substrate surface (col 1 L 14-15).

The metal layer which can be an aluminum layer, is coated with a silicon compound A (col 2 L 33-34 & 37-40). The silicon compound A is a commercially available compound which is mainly a crosslinkable organic silane compound (col 3 L 36-65 & col 4 L 1-15).

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1794

4. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolter et al (US 5116472) in view of Hamakawa et al (US 4612409).

Wolter discloses a silicon compound coated aluminum foil for used as a printed wiring board substrate. Wolter however is silent about the thickness of the crosslinkable polysilane compound and its dielectric constant.

Hamakawa teaches a flexible photovoltaic device comprised of a substrate (1) and an electrode (2) (Fig. 1).

The electrode (2) is formed onto the surface of the substrate (1). The substrate is comprised of a metal layer (1a) and a polymeric layer (1b), the metallic layer (1a) can be an aluminum foil and the polymeric layer (1b) can be a silicone (col 3 L 6-7 & L 19-24). The polymer layer (1b) (or silicone) has a thickness of from 1-20 µm (col 3 L 26-28).

In view of the prior art teachings, one skill in the art would choose an insulating silicone material that is optimum to his invention because it is a matter of design scheme.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cathy Lam whose telephone number is (571) 272-1538. The examiner can normally be reached on 9am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571) 272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
